

26 September 1985

MEMORANDUM FOR: Chief, ESG
Chief, ADD/ESG

FROM: Chief, FED/ESG

SUBJECT: Interim Automation Initiatives

FED is presently conducting a market survey for the availability of an "off-the-shelf" communications concentrator. Unit would be able to accept "X" number of communication lines at variable baud rate and feed out at a much higher baud rate into the switch. Units should be DCA Category "A" and "Category C" certified. This concentrator would be located at the Quantico Ground Station and fed into any switch designated by DCA. Do not believe LEC would be involved in this communications aspect of INTERNET.
